

Java

```
class Solution {  
    public long maxSpending(int[][] values) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[][]} values  
 * @return {number}  
 */  
var maxSpending = function(values) {  
  
};
```

TypeScript

```
function maxSpending(values: number[][]): number {  
  
};
```

C++

```
class Solution {  
public:
```

```
    long long maxSpending(vector<vector<int>>& values) {  
    }  
};  
-----
```

C#

```
public class Solution {  
    public long MaxSpending(int[][] values) {  
    }  
}
```

Kotlin

```
class Solution {  
    fun maxSpending(values: Array<IntArray>): Long {  
    }  
}
```

Go

```
func maxSpending(values [][]int) int64 {  
}
```
